

ABSTRACT OF THE DISCLOSURE

Sub A1  
5 The present invention comprises a deactivator for deactivating a security tag activated and attached to a commodity after a barcode is read by a reader, a magnetic detector for detecting magnetism of the security tag having been deactivated by the deactivator, and a control section for sending the result of detection by the magnetic detector to an operator with an LED and a speaker, and the operator recognizes whether the security of the security tag is released or not according to the light  
10 through the LED and sound by the speaker.
